UNIVERSITY GUIDELINES AND REGULATIONS

I. MISSION

The Adventist University of Central Africa (AUCA) is committed to provide Christ-centered quality education founded on a holistic approach that prepares people for the service of this life and the life to come.

II. VISION

The Adventist University of Central Africa (AUCA) is to be a Centre of excellence in undergraduate and graduate programs. Quality shall be the hallmark of all its undertaking including research and service delivery to its Students, Faculty, Staff and the Community at large.

III. INTRODUCTION

This book is to assist the student to keep record of the training. It will show the departments and sections in which the student has worked and the periods spent in each.

This is an industrial type of training to students in a business practical environment, which expose students with practical responsibilities as a business personnel or executive administrator, solving business problems while exhibiting skills and practice previously acquired. A minimum of 240 hours of 6 continuous weeks of Industrial Attachment / Practicum in a well and relevant established company / business environment is required.

Students are expected to exhibit desirable attitude, good work habits, initiative, proper decorum developed through the course.

IV. DURATION OF THE ATTACHMENT

The duration of the industrial attachment shall be between 6 and 8 weeks (minimum 240 to 300 working hours).

V. INSTRUCTION TO THE STUDENT

The attachment program is considered as two examinable units that the students are supposed to undertake and be examined. The whole exercise is marked out of 100 marks:

- The Industry supervisor: 30 marks
- University supervisor: 30 marks
- Industrial attachment report: 30 marks
- Log Book Presentation: 10 marks

Total: 100 marks.

VI. NOTICE OF RESUMPTION OF ATTACHMENT

The student is supposed to notify the Attachment coordinator by filling a form provided regarding the details where he/she is attached. This should be communicated to the above within the first week of getting the attachment.

VII. DAILY REPORT

The daily work carried out during the period of training is to be recorded clearly with sketches and diagrams where applicable.

VIII. WEEKLY SUMMARY REPORT

This is a summary of the work done in a week and should cover a report of work covered. Students are required to present the logbook weekly to the industry-based supervisor for assessment of content and progress. The supervisor can use any page for his/her comments where necessary.

IX. CHANGE OF ATTACHMENT

A student is expected to start and finish his/her attachment in one establishment. If it becomes necessary that he/she must change his/her place of attachment, the student should first secure permission in writing from the university. His/her application for change of place of attachment should indicate the name and address (not just post-office box) of the company or industry to which he/she wishes to transfer. Any attachment not properly authorized will be cancelled.

X. ATTACHMENT LOGBOOK

The logbook will be filled by the student at the end of every working day and should comprehensively indicate the tasks done and the skills learnt in that particular day. The logbook should be kept at the workplace and MUST NOT be carried home.

XI. UNIVERSITY SUPERVISOR'S VISIT

The university supervisor will check the logbook when he/she visits the students to ensure that proper training is being received, and record his/her comment on the paper provided for that purpose, toward the end of the book.

XII. INDUSTRY BASED SUPERVISOR

The industry-based supervisor(s) will make comments on a weekly basis on the sheet of paper provided. This is to ensure that if the student is to rotate to several departments and units each unit supervisor will comment on the student performance.

XIII. EXPECTED OUTCOME

At the end of this training, students or trainee is expected to have gained experience and grasped the job or business core methods, procedures and techniques.

Major objective of the attachment exercise is to gain practical exposure of a business practical environment and practice with responsibilities as a business personnel or executive administrator, solving business problems while exhibiting skills and practice previously acquired.

Students are expected to exhibit desirable attitude, good work habits, initiative, proper decorum developed through the training. Trainees will also be required to keep a daily record of activities as per the format provided and to be presented at the end of the attachment exercise. This can be included in the student's report as one of the attachments.

XIV. EXPECTED OUTPUT

The Industrial attachment is expected to have multi-dimensional benefits looking at students, the Adventist University of Central Africa, and the University partners / Attachment organizations.

Students

1. Will acquire new knowledge and practical experiences
2. Will improve his/her confidence in problem solving
3. Will have opportunity to relate with different categories of people likely to be met in the real-life situation
4. Will gain exposure to the demands and challenges of the workplace
5. Will get opportunity to meet and work with potential employers
6. Will have improved appreciation of the profession and therefore better work

AUCA

1. Will get opportunity to appreciate client demands and the quality of graduates required to fulfill these demands
2. As a result of cooperation, the potential for research will be enhanced and developed with the various partners
3. Will get opportunity to access training and resources that are not available at AUCA

University partners / Attachment Organization

1. Will get opportunity to be involved in the training and review of our programmes
2. Will be exposed to a pool of potential employees from which to select. This will ultimately reduce on the costs of recruitment and induction / orientation of new employees
3. Will get additional Human Resources for effective and efficient service delivery

XV. COURSE WORK AND PROCEDURES Expectations from Students (Roles and Responsibilities)

In this exercise students are expected to identify an organization / company / institution in his or her career. He or she will then apply for Industrial Attachment / Practicum following all requirements of the organization / company / institution. A student applying for Industrial Attachment / Practicum will be issued a recommendation letter which will be submitted together with his or her application to the organization / company / institution.

If accepted, a student is expected to produce an acceptance letter from the organization / company / institution to his or her department and a copy to the Faculty Industrial Attachment / Practicum Coordinator. A student will also be required to submit the physical address to his or her department and a copy to the Faculty Industrial Attachment / Practicum Coordinator.

A student has to make sure that he/she is fully registered before commencing the industrial training exercise. The procedure for registration and the fee amounts will be provided by the registrar’s office.

A student should attend the Faculty Industrial Attachment / Practicum Orientation to be organized by the Industrial Attachment / Practicum Coordinator. The said orientation program will be announced and take place in a semester before the Industrial Attachment / Practicum period. All industrial students are expected to attend without fail. Issues to be discussed will include presentation of this Industrial Attachment / Practicum outline and clarification on issues such as:

1. Registration
2. Payment of fees
3. Industrial Attachment / Practicum Instruments
4. Report format

5. Daily Record Keeping (Daily Record Sheet will be provided)
6. Grading structure and procedure
7. AOB

The students should attain the minimum attendance hours that are set per the industrial attachment requirements. Any student who fails to fulfill this requirement will either be referred or will be requested to redo the course/internship.

1. Take field attachment as part and parcel of their training at AUCA and have positive attitude towards learning by practice.
2. Respect all field supervisors and any other persons they interact with throughout their field attachment period regardless of their background training and economic differentiation.
3. Work willingly wherever they are posted/attached.
4. Adhere to the field attachment code of conduct.
5. Provide report and other forms of feedback to the University and the host partners.
6. A student will be required to submit a draft report at the end of attachment to the field supervisor for review and endorsement before final submission to their lecturers or staff from the Faculty of Information Technology. The organization / company / institution shall retain a copy of the final report and the original shall be submitted to the School.
7. Final Industrial or practicum Attachment Report: Every student shall be required to produce a field attachment report at the end of the exercise to the faculty, which report should be checked and signed by the student himself or herself and both the Field and University Supervisors. It should be well written in good English and systematically organized.
8. Each student is advised to make enough copies of the log book forms for all the days and weeks of his or her Industrial or practicum Attachment period accordingly (i.e. Form II for all the weeks & Form III for each day).

XVI. INDUSTRIAL ATTACHMENT ASSESSMENT

Students will undergo:

1. Progressive assessment throughout the course/attachment
2. Practical assessment
3. Final written assessment

Students will be required to attain a minimum of 75% grade in order to qualify for graduation.

Grading Shall Consist of the Following:

1. Field Supervisor Evaluation: 30%
2. Student Report: 30%
3. University Staff Evaluation: 30%
4. Logbook: 10%

Total: 100%

XVII. FIELD SUPERVISOR EVALUATION

The following are some of the attributes where a student will be evaluated by the field supervisor while on Industrial Attachment / Practicum. An Industrial Attachment / Practicum Appraisal form is provided in this booklet (Appraisal Form 2) to evaluate the student on the following:

- Knowledge of the job
- Quality of work
- Quantity of work
- Attitude
- Judgment
- Reliability
- Attendance and Punctuality
- Flexibility - adaptability
- Personal characteristics

An Industrial Attachment / Practicum Appraisal Form is attached for both self and supervisors appraisals.

XVIII. UNIVERSITY STAFF EVALUATION

A staff from the University, who will visit the trainee in the field or workplace, will assess the student and give the overall progress, performance, quality of the student's report and the relevancy of the training.

This assessment will be subjected to interactions between the staff from the university and the field supervisor; and from his or her interview with the trainee. In this, the staff from the university will possibly have a look at the exact jobs done by the trainee as will be permitted by the organization / company / institution where the trainee is attached.

XIX. STUDENT'S REPORT

Preliminary pages

- **Cover page:** The cover page should include the following: Name of the University, School, Title of the document; a place where it is done; Course Code; Submitted to the faculty in partial fulfillment of the requirements for the degree (state your programme) of AUCA, name of the student, ID number, to whom you are submitting the report, and the date of submission.
- **Table of Contents:** This should show the contents of the report by sections and sub-sections with the page numbers on which such content is found in the report.
- **Acknowledgement:** The student should acknowledge those who contributed to the successful completion of his / her industrial attachment / practicum.
- **List of figures:** Every figure in the report should have its caption at its bottom, and such captions should be listed here with the page numbers on which the respective figures are found.
- **List of tables:** All tables should be numbered and headed just like figures above, and listed with their full meaning reflected / given.
- **List of acronyms / Abbreviations:** Abbreviations and acronyms used in the report should be listed and their full meaning reflected / given.

Example of the Cover Page

FACULTY OF INFORMATION TECHNOLOGY A REPORT ON INDUSTRIAL ATTACHMENT AT CODAFRIQA COURSE CODE: INAT 353 INDUSTRIAL ATTACHMENT Submitted to the Faculty of Information Technology in partial fulfillment of the requirements for the degree in Information Technology (Information Management) of the Adventist University of Central Africa (AUCA) **BY:** SHYAKA Jospin **STUDENT ID:** 26119 **PERIOD:** 17th August to 16th October, 2026

XX. THE MAIN REPORT

This should be arranged in sections and presented coherently with maturity in the way and style of writing. The different sections should include:

1. **INTRODUCTION:** Give a brief description of your field report indicating what it is about, place of attachment and period, and what the report presents/covers in order to give direction to the reader.
2. **CORE BUSINESS:** Indicate the department attached to and your job description or what you were doing (tasks given) during the period of Industrial Attachment / Practicum.
3. **SELF EVALUATION REPORT (SWOT ANALYSIS):** What you liked most, challenges faced, practical application of knowledge, academic curriculum recommendations.
4. **CONCLUSION:** Summary and lessons learnt.
5. **REFERENCES:** All cited sources using APA style.
6. **APPENDICES:** Additional relevant documents (filled logbook, tables, screenshots, system architecture diagrams).

XXI. INDUSTRIAL ATTACHMENT / PRACTICUM FORMS

Instructions on how to use the Industrial Attachment / Practicum forms (Instruments):

1. **LOG FORM I:** This form serves as the first page of the Industrial Attachment / Practicum Students' Weekly Log Book. It is to be filled by the trainee with personal information (Bio-data).
2. **LOG FORM II:** This is a weekly summary report filled by the trainee on a daily basis (time in, time out, total hours, challenges faced, lessons learnt). Signed by trainee and trainer weekly.
3. **LOG FORM III:** This is used by the trainee to give daily detailed description of work done (job sequence of operations, tools/equipment used, tasks completed, tasks in progress, next day's tasks, problems/challenges, student's recommendations, supervisor's comments).
4. **APPRAISAL FORM 1 (Self-Evaluation Form):** Used by the trainee to appraise himself or herself across standard factors.
5. **APPRAISAL FORM 2 (Industrial Attachment Appraisal Form):** Used by the trainer/field supervisor to appraise the apprentice (trainee) across 9 core attributes.
6. **FACULTY REPORT FORM 1 & 2:** Used by the university supervisor on visitation.

XXII. FURTHER POINTS TO NOTE / INSTRUCTIONS

- **Ethical code of conduct:** A trainee is expected to present himself or herself in a respectable, decent and professional manner at all times during official working hours.
- **Dress code:** A trainee is expected to dress decently and professionally according to university standards.
- **Late submission of report:** Illness may not always be a sufficient reason to delay submission. Neither are problems with a computer, printer or disk. Students are expected to plan for contingencies. Serious illness and exceptional circumstances require written notification 2 days before the deadline.
- **Cheating / Copying:** Individual work turned in for credit must be the student's own work. Cheating or copying in any form will not be tolerated and will result in automatic failure of the Industrial Attachment.

XXIII. STUDENT DECLARATION / CONSENT

I, **SHYAKA Jospin** (Student ID: 26119), declare that I have read and understood the contents of these guidelines, and I agree to abide by all the academic, ethical, and professional standards stipulated herein throughout my industrial attachment.

Signature: ..... **Date:** 17/08/2026

DAILY DETAILED DESCRIPTION OF WORK

Day 1 — Monday, 17/08/2026

Week No: 1 | **Day:** 1 | **Month:** 1 | **Date:** 17/08/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Reported to CODAFRIQA headquarters for the first day of attachment; introductory orientation meeting with industry supervisor Mr. IRANKUNDA BADAGA Steven; office tour, introduction to the AI engineering squad, and assignment of developer workstation; reviewed company IT guidelines, software policies, and code of conduct.	Laptop, Slack, Browser
2. Tasks in progress: Setting up development accounts and Slack/GitHub access.	Laptop, Slack, Browser
3. Next day's tasks: Install the local development toolchain (Node.js, Docker, PostgreSQL, VS Code) and verify project repository access.	Laptop, Slack, Browser
4. Problems / challenges: Getting accustomed to the new enterprise office environment and internal communication channels.	Laptop, Slack, Browser
5. Student's Recommendations: A centralized first-day onboarding checklist would help new engineering interns set up faster.	Laptop, Documentation
6. Field supervisor's comments: Welcomed Jospin to the AI team. Discussed internship goals and high-level platform architecture. Good start.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 17/08/2026

Day 2 — Tuesday, 18/08/2026

Week No: 1 | **Day:** 2 | **Month:** 1 | **Date:** 18/08/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Installed and configured core development tools: Node.js (v24 LTS), Git with SSH authentication, VS Code with TypeScript/ESLint/Tailwind extensions, Docker Desktop, PostgreSQL 16 client, Redis, and Postman; verified environment variable configuration.	Laptop, VS Code, Docker, Git, Terminal
2. Tasks in progress: Verifying container networking and database connectivity.	Laptop, VS Code, Docker, Git, Terminal
3. Next day's tasks: Clone project repository and study the full 17-page AI Resume Screening Platform specification.	Laptop, VS Code, Docker, Git, Terminal
4. Problems / challenges: Resolving local Docker network port collisions on Windows between local PostgreSQL and Docker container.	Laptop, VS Code, Docker, Git, Terminal
5. Student's Recommendations: Using docker-compose environment variables simplifies port mapping across different host setups.	Laptop, Documentation
6. Field supervisor's comments: Toolchain verified. Recommended Jospin review our Git branching strategy and commit conventions.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 18/08/2026

Day 3 — Wednesday, 19/08/2026

Week No: 1 | **Day:** 3 | **Month:** 1 | **Date:** 19/08/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Conducted an in-depth review of the CODAFRIQA AI Resume Screening Platform specification (Version 1.0); analyzed business requirements, stakeholder user roles (Admin, Recruiter, Hiring Manager, Interviewer, Auditor, Candidate), and minimum completion criteria.	Laptop, PDF Reader, MS Word, Notepad
2. Tasks in progress: Decomposing user stories into functional requirements and acceptance tests.	Laptop, PDF Reader, MS Word, Notepad
3. Next day's tasks: Initialize the Next.js project repository and configure foundational developer tooling.	Laptop, PDF Reader, MS Word, Notepad
4. Problems / challenges: Understanding the boundaries between AI-assisted decision support and mandatory human authority.	Laptop, PDF Reader, MS Word, Notepad
5. Student's Recommendations: Explicitly mapping user roles to workflow states in a tabular matrix clarifies access boundaries.	Laptop, Documentation
6. Field supervisor's comments: Thorough requirements analysis. Good questions raised regarding human-in-the-loop screening rules.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 19/08/2026

Day 4 — Thursday, 20/08/2026

Week No: 1 | **Day:** 4 | **Month:** 1 | **Date:** 20/08/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Initialized the Next.js 16 application repository using App Router, React 19, and TypeScript; configured Tailwind CSS design system tokens, ESLint v9 flat configuration, Prettier, and Vitest test runner; verified base layout rendering.	Laptop, VS Code, Next.js, TypeScript, Terminal
2. Tasks in progress: Refining base layout structure and global style tokens.	Laptop, VS Code, Next.js, TypeScript, Terminal
3. Next day's tasks: Draft system architecture proposal and entity-relationship models for database schema.	Laptop, VS Code, Next.js, TypeScript, Terminal
4. Problems / challenges: Configuring ESLint v9 flat config with Next.js 16 required specific plugin compatibility adjustments.	Laptop, VS Code, Next.js, TypeScript, Terminal
5. Student's Recommendations: Standardizing code formatting and linting early prevents team merge conflicts.	Laptop, Documentation
6. Field supervisor's comments: Project repository initialized cleanly. Next.js App Router structure approved.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 20/08/2026

Day 5 — Friday, 21/08/2026

Week No: 1 | **Day:** 5 | **Month:** 1 | **Date:** 21/08/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Drafted high-level system architecture proposal and preliminary Entity-Relationship (ER) diagrams; mapped data flow between web client, Next.js server actions, Redis/BullMQ background worker, and PostgreSQL database; reviewed architecture with supervisor.	Laptop, Draw.io, VS Code, MS Word
2. Tasks in progress: Finalizing architectural proposal and Week 1 deliverables.	Laptop, Draw.io, VS Code, MS Word
3. Next day's tasks: Begin relational database schema modeling in Prisma for multi-tenant organizations and users.	Laptop, Draw.io, VS Code, MS Word
4. Problems / challenges: Balancing asynchronous background resume processing with immediate UI feedback requirements.	Laptop, Draw.io, VS Code, MS Word
5. Student's Recommendations: Using Redis-backed message queues ensures file parsing does not block web request execution.	Laptop, Documentation
6. Field supervisor's comments: Architecture proposal reviewed and approved. Good understanding of decoupled services and queues.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 21/08/2026

Week 1 Summary Report

Week No: 1 | **Month:** 1 | **Date Range:** 17/08/2026 To 21/08/2026

Weekly Summary Narrative

During the first week of my internship at CODAFRIQA, I successfully onboarded into the AI engineering division, completed workplace orientation, and configured my developer workstation with Node.js v24, Docker Desktop, PostgreSQL 16, and Git. I conducted an exhaustive review of the 17-page AI Resume Screening Platform specification, clarifying business boundaries and user roles with my supervisor Mr. Irankunda Badaga Steven. I initialized the Next.js 16 project repository with TypeScript, Tailwind CSS, and ESLint, and drafted the high-level architecture proposal mapping decoupled client, server, and worker interactions.

Problems Encountered & Solutions: Resolving local Docker network port conflicts on Windows and configuring ESLint v9 flat config with Next.js 16.

New Skills & Knowledge Acquired: Standardized environment configuration, strict TypeScript typing, and architectural planning before writing code.

Field Supervisor Remarks: Jospin adapted quickly to our engineering workflow and demonstrated great initiative in studying the project specification. Environment and repository setup completed smoothly.

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 21/08/2026

Day 6 — Monday, 24/08/2026

Week No: 2 | **Day:** 1 | **Month:** 1 | **Date:** 24/08/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Initiated Prisma 7 ORM setup; authored database schema models for Organization, User, and UserRole; implemented multi-tenant organization boundaries and foreign key relations; executed initial migration in PostgreSQL.	Laptop, VS Code, Prisma, PostgreSQL, Terminal
2. Tasks in progress: Validating relational constraints and enum values.	Laptop, VS Code, Prisma, PostgreSQL, Terminal
3. Next day's tasks: Model Job Requisition, Criteria, and Rubric entities with versioning support.	Laptop, VS Code, Prisma, PostgreSQL, Terminal
4. Problems / challenges: Ensuring database schema enforces tenant isolation strictly at the foreign key constraint level.	Laptop, VS Code, Prisma, PostgreSQL, Terminal
5. Student's Recommendations: Composite indexes on organizationId and createdAt will improve tenant-specific queries.	Laptop, Documentation
6. Field supervisor's comments: Database foundation solid. Good adherence to relational normalization principles.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 24/08/2026

Day 7 — Tuesday, 25/08/2026

Week No: 2 | **Day:** 2 | **Month:** 1 | **Date:** 25/08/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Designed and modeled Job Requisition, Rubric, and Criterion entities in Prisma; implemented rubric versioning logic ensuring approved rubrics remain immutable once candidate screening commences; ran Prisma migrations.	Laptop, VS Code, Prisma, PostgreSQL
2. Tasks in progress: Testing rubric versioning and cascading delete rules.	Laptop, VS Code, Prisma, PostgreSQL
3. Next day's tasks: Implement core authentication flows and session management with NextAuth.	Laptop, VS Code, Prisma, PostgreSQL
4. Problems / challenges: Preventing accidental modifications to active rubrics that could invalidate historical evaluation scores.	Laptop, VS Code, Prisma, PostgreSQL
5. Student's Recommendations: Creating an isApproved boolean flag and incrementing version numbers preserves audit integrity.	Laptop, Documentation
6. Field supervisor's comments: Rubric versioning logic is well-architected. Crucial for legal compliance and explainable screening.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 25/08/2026

Day 8 — Wednesday, 26/08/2026

Week No: 2 | **Day:** 3 | **Month:** 1 | **Date:** 26/08/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Implemented user authentication subsystem using NextAuth (v4) with credentials provider; configured bcryptjs for secure salted password hashing; set up JWT session handling stored in HTTP-only, secure, SameSite cookies.	Laptop, VS Code, NextAuth, Postman
2. Tasks in progress: Testing authentication edge cases and invalid credential handling.	Laptop, VS Code, NextAuth, Postman
3. Next day's tasks: Build Role-Based Access Control (RBAC) middleware for route and API protection.	Laptop, VS Code, NextAuth, Postman
4. Problems / challenges: Securing session cookies across both local HTTP development and production HTTPS environments.	Laptop, VS Code, NextAuth, Postman
5. Student's Recommendations: Strict cookie flags (SameSite=Lax, HttpOnly) mitigate common CSRF and XSS token theft vectors.	Laptop, Documentation
6. Field supervisor's comments: Authentication flows cleanly implemented. Password hashing and JWT token handling validated.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 26/08/2026

Day 9 — Thursday, 27/08/2026

Week No: 2 | **Day:** 4 | **Month:** 1 | **Date:** 27/08/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Engineered Role-Based Access Control (RBAC) middleware; defined permission resolver mapping roles (Admin, Recruiter, Hiring Manager, Interviewer, Auditor, Candidate) to allowed operations; protected server actions and API route handlers.	Laptop, VS Code, TypeScript, Vitest
2. Tasks in progress: Writing unit tests for RBAC permission guard functions.	Laptop, VS Code, TypeScript, Vitest
3. Next day's tasks: Implement Prisma client extension for automatic multi-tenant query filtering.	Laptop, VS Code, TypeScript, Vitest
4. Problems / challenges: Handling role inheritance cleanly without creating complex circular permission hierarchies.	Laptop, VS Code, TypeScript, Vitest
5. Student's Recommendations: Centralizing role authorization in reusable higher-order guard functions reduces code duplication.	Laptop, Documentation
6. Field supervisor's comments: RBAC permission guards tested and verified. Security boundaries are appropriately enforced.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 27/08/2026

Day 10 — Friday, 28/08/2026

Week No: 2 | **Day:** 5 | **Month:** 1 | **Date:** 28/08/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Implemented multi-tenant query isolation middleware in Prisma client; ensured every SELECT, UPDATE, and DELETE query automatically injects the tenant organizationId; conducted Week 2 sprint review with supervisor.	Laptop, VS Code, PostgreSQL, Postman
2. Tasks in progress: Benchmarking multi-tenant query overhead.	Laptop, VS Code, PostgreSQL, Postman
3. Next day's tasks: Begin resume document upload and intake processing pipeline.	Laptop, VS Code, PostgreSQL, Postman
4. Problems / challenges: Ensuring that raw SQL queries or nested relational includes cannot bypass tenant boundary filters.	Laptop, VS Code, PostgreSQL, Postman
5. Student's Recommendations: Validating tenant isolation through automated unit tests that deliberately attempt cross-tenant reads.	Laptop, Documentation
6. Field supervisor's comments: Week 2 completed successfully. Multi-tenant isolation verified with zero cross-tenant leakage.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 28/08/2026

Week 2 Summary Report

Week No: 2 | **Month:** 1 | **Date Range:** 24/08/2026 To 28/08/2026

Days	Brief Description of work/activity performed	Time In	Time Out	Total Hours	Lessons Learnt	Challenges Faced
Mon 24/08/2026	Initiated Prisma 7 ORM setup	8:30 AM	5:00 PM	8.5 hrs	Learned enterprise workflow norms	Ensuring database schema enforces tenant isolation strictly
Tue 25/08/2026	Designed and modeled Job Requisition, Rubric, and Criterion entities in Prisma	8:30 AM	5:00 PM	8.5 hrs	Applied software engineering best practices	Preventing accidental modifications to active rubrics that c
Wed 26/08/2026	Implemented user authentication subsystem using NextAuth (v4) with credentials provider	8:30 AM	5:00 PM	8.5 hrs	Applied software engineering best practices	Securing session cookies across both local HTTP development
Thu 27/08/2026	Engineered Role-Based Access Control (RBAC) middleware	8:30 AM	5:00 PM	8.5 hrs	Applied software engineering best practices	Handling role inheritance cleanly without creating complex c
Fri 28/08/2026	Implemented multi-tenant query isolation middleware in Prisma client	8:30 AM	5:00 PM	8.5 hrs	Applied software engineering best practices	Ensuring that raw SQL queries or nested relational includes

Weekly Summary Narrative

In Week 2, I focused on relational data architecture, authentication, and multi-tenant security foundations. Using Prisma ORM and PostgreSQL, I modeled and migrated database entities for Organizations, Users, Roles, Job Requisitions, Criteria, and Rubrics, implementing versioning rules for approved rubrics. I integrated NextAuth with salted bcrypt password hashing and secure JWT session tokens, engineered Role-Based Access Control (RBAC) middleware guarding all routes, and built Prisma client query middleware enforcing strict organizational tenant isolation.

Problems Encountered & Solutions: Ensuring immutable rubric versioning to prevent score invalidation and preventing cross-tenant data leaks in nested queries.

New Skills & Knowledge Acquired: Relational normalization, database indexing strategies, secure session cookie management, and centralized RBAC architecture.

Field Supervisor Remarks: Database modeling and multi-tenant security boundaries are exceptionally well-implemented. Great attention to security details.

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 28/08/2026

Day 11 — Monday, 31/08/2026

Week No: 3 | **Day:** 1 | **Month:** 1 | **Date:** 31/08/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Designed and implemented candidate job application submission endpoint and frontend upload interface; created drag-and-drop resume upload zone with client-side file size and extension pre-validation.	Laptop, VS Code, Next.js, React, Tailwind CSS
2. Tasks in progress: Handling file upload progress indicators and cancel actions.	Laptop, VS Code, Next.js, React, Tailwind CSS
3. Next day's tasks: Implement server-side MIME-type magic byte validation and malware upload security checks.	Laptop, VS Code, Next.js, React, Tailwind CSS
4. Problems / challenges: Preventing client-side bypass of file format restrictions.	Laptop, VS Code, Next.js, React, Tailwind CSS
5. Student's Recommendations: Client validation improves UX, but strict server-side validation is strictly mandatory for security.	Laptop, Documentation
6. Field supervisor's comments: Candidate application intake UI looks clean and user-friendly. Ready for backend validation.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 31/08/2026

Day 12 — Tuesday, 01/09/2026

Week No: 3 | **Day:** 2 | **Month:** 1 | **Date:** 01/09/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Engineered server-side file upload validator: implemented magic-byte inspection verifying true PDF and DOCX binary headers, enforced 5MB size limit, and applied filename sanitization to eliminate path traversal vulnerabilities.	Laptop, VS Code, Node.js, Postman
2. Tasks in progress: Integrating local and cloud storage adapters for uploaded resumes.	Laptop, VS Code, Node.js, Postman
3. Next day's tasks: Integrate text extraction libraries (pdf-parse and mammoth) for resume parsing.	Laptop, VS Code, Node.js, Postman
4. Problems / challenges: Handling disguised malicious files with forged extensions (e.g., executable renamed to .pdf).	Laptop, VS Code, Node.js, Postman
5. Student's Recommendations: Binary header inspection reliably identifies true file types regardless of file extension.	Laptop, Documentation
6. Field supervisor's comments: Robust file validation implementation. Good attention to OWASP file upload security guidelines.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 01/09/2026

Day 13 — Wednesday, 02/09/2026

Week No: 3 | **Day:** 3 | **Month:** 1 | **Date:** 02/09/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Integrated `pdf-parse` for PDF resumes and `mammoth` for DOCX files; created structured document text extraction service; implemented heuristic cleaners normalizing excess whitespace, tab characters, and non-printable artifacts.	Laptop, VS Code, pdf-parse, mammoth, Terminal
2. Tasks in progress: Handling multi-column PDF layouts and irregular resume formatting.	Laptop, VS Code, pdf-parse, mammoth, Terminal
3. Next day's tasks: Configure Redis and BullMQ for asynchronous background document extraction.	Laptop, VS Code, pdf-parse, mammoth, Terminal
4. Problems / challenges: Multi-column resume layouts occasionally cause text segments from separate columns to interleave.	Laptop, VS Code, pdf-parse, mammoth, Terminal
5. Student's Recommendations: Post-processing extracted text with line-break heuristics helps reconstruct logical reading order.	Laptop, Documentation
6. Field supervisor's comments: Text extraction service operating as expected. Ready for asynchronous background queue integration.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 02/09/2026

Day 14 — Thursday, 03/09/2026

Week No: 3 | **Day:** 4 | **Month:** 1 | **Date:** 03/09/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Configured Redis connection and BullMQ queue infrastructure; created `resume-processing` queue and worker thread; moved heavy text extraction logic to background workers; implemented job status updates (QUEUED, PROCESSING, COMPLETED, FAILED).	Laptop, VS Code, Redis, BullMQ, Docker
2. Tasks in progress: Testing worker concurrency limits and job timeout handling.	Laptop, VS Code, Redis, BullMQ, Docker
3. Next day's tasks: Parse extracted text into structured candidate profile entities in the database.	Laptop, VS Code, Redis, BullMQ, Docker
4. Problems / challenges: Managing worker thread resource usage during sudden bursts of concurrent resume uploads.	Laptop, VS Code, Redis, BullMQ, Docker
5. Student's Recommendations: Setting a concurrency limit of 3 jobs per worker prevents CPU spikes on the application server.	Laptop, Documentation
6. Field supervisor's comments: BullMQ asynchronous queue integration is clean and resilient. Excellent work on worker architecture.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 03/09/2026

Day 15 — Friday, 04/09/2026

Week No: 3 | **Day:** 5 | **Month:** 1 | **Date:** 04/09/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Built entity extraction parser mapping extracted text into structured candidate records (skills, years of experience, education, previous employers); persisted parsed profiles to PostgreSQL; conducted Week 3 review with supervisor.	Laptop, VS Code, PostgreSQL, Prisma
2. Tasks in progress: Evaluating extraction accuracy across sample resumes.	Laptop, VS Code, PostgreSQL, Prisma
3. Next day's tasks: Formulate structured AI evaluation prompts using OpenAI GPT-4o API.	Laptop, VS Code, PostgreSQL, Prisma
4. Problems / challenges: Handling resumes with non-standard section headings or missing education dates.	Laptop, VS Code, PostgreSQL, Prisma
5. Student's Recommendations: Storing raw extracted text alongside structured profile entities allows re-parsing if schemas change.	Laptop, Documentation
6. Field supervisor's comments: Week 3 milestone completed on schedule. Resume intake, queueing, and parsing fully operational.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 04/09/2026

Week 3 Summary Report

Week No: 3 | **Month:** 1 | **Date Range:** 31/08/2026 To 04/09/2026

Days	Brief Description of work/activity performed	Time In	Time Out	Total Hours	Lessons Learnt	Challenges Faced

Weekly Summary Narrative

Week 3 was dedicated to developing the secure resume ingestion and asynchronous parsing pipeline. I built the candidate application upload interface and server-side validation rejecting files over 5MB, verifying true PDF and DOCX binary magic-byte headers, and sanitizing filenames. I integrated pdf-parse and mammoth for text extraction and configured Redis and BullMQ to process parsing jobs asynchronously in background worker threads, persisting parsed skills and experience into structured candidate database records.

Problems Encountered & Solutions: Handling corrupted multi-column PDF layouts and managing worker concurrency during burst resume uploads.

New Skills & Knowledge Acquired: Asynchronous task queueing with BullMQ, binary header inspection for file security, and resilient background worker error handling.

Field Supervisor Remarks: The asynchronous resume processing queue operates reliably with zero UI blocking. Robust error and retry handling.

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 04/09/2026

Day 16 — Monday, 07/09/2026

Week No: 4 | **Day:** 1 | **Month:** 2 | **Date:** 07/09/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Designed structured AI evaluation prompt architecture utilizing OpenAI GPT-4o API in JSON mode; defined rigorous output schema enforcing criterion-level assessment, numerical scores, and qualitative summaries.	Laptop, VS Code, OpenAI API, TypeScript
2. Tasks in progress: Refining prompt instructions to eliminate model hallucinations.	Laptop, VS Code, OpenAI API, TypeScript
3. Next day's tasks: Implement criterion-level semantic evaluation matching resumes to rubric requirements.	Laptop, VS Code, OpenAI API, TypeScript
4. Problems / challenges: Ensuring the LLM adheres strictly to the requested JSON structure without emitting conversational text.	Laptop, VS Code, OpenAI API, TypeScript
5. Student's Recommendations: OpenAI structured outputs mode guarantees schema adherence at the API response level.	Laptop, Documentation
6. Field supervisor's comments: Prompt architecture looks disciplined. Structured output enforcement is essential for reliability.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 07/09/2026

Day 17 — Tuesday, 08/09/2026

Week No: 4 | **Day:** 2 | **Month:** 2 | **Date:** 08/09/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Implemented weighted criteria scoring engine; engineered algorithms computing aggregate match scores based on mandatory and preferred rubric criteria weights; verified score calculation math against test rubrics.	Laptop, VS Code, TypeScript, Vitest
2. Tasks in progress: Testing edge cases where candidates possess transferable rather than exact skills.	Laptop, VS Code, TypeScript, Vitest
3. Next day's tasks: Implement verbatim evidence quote extraction linked to source resume text.	Laptop, VS Code, TypeScript, Vitest
4. Problems / challenges: Preventing candidate disqualification if a preferred (optional) criterion is missing.	Laptop, VS Code, TypeScript, Vitest
5. Student's Recommendations: Separating mandatory criteria from preferred criteria ensures balanced and fair scoring.	Laptop, Documentation
6. Field supervisor's comments: Scoring math verified. Good mathematical balance between required and optional qualifications.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 08/09/2026

Day 18 — Wednesday, 09/09/2026

Week No: 4 | **Day:** 3 | **Month:** 2 | **Date:** 09/09/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Engineered verbatim evidence extraction subsystem: required the AI model to return exact textual quotations from the candidate resume for every evaluated criterion; implemented verification matching quotes back to extracted text.	Laptop, VS Code, TypeScript, Node.js
2. Tasks in progress: Handling approximate quote matching due to whitespace differences.	Laptop, VS Code, TypeScript, Node.js
3. Next day's tasks: Implement explicit uncertainty detection for ambiguous or unverified candidate claims.	Laptop, VS Code, TypeScript, Node.js
4. Problems / challenges: LLMs occasionally paraphrase slightly rather than quoting verbatim from source documents.	Laptop, VS Code, TypeScript, Node.js
5. Student's Recommendations: Applying fuzzy substring verification validates whether cited quotes genuinely exist in the resume.	Laptop, Documentation
6. Field supervisor's comments: Verbatim citation verification is a critical feature for transparency and candidate auditing.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 09/09/2026

Day 19 — Thursday, 10/09/2026

Week No: 4 | **Day:** 4 | **Month:** 2 | **Date:** 10/09/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Implemented explicit uncertainty detection: when resume evidence is vague, ambiguous, or contains unexplained date gaps, the system flags the criterion as 'Uncertain / Human Review Required' rather than guessing.	Laptop, VS Code, TypeScript, Vitest
2. Tasks in progress: Testing uncertainty flag triggers on problematic sample resumes.	Laptop, VS Code, TypeScript, Vitest
3. Next day's tasks: Construct controlled AI benchmark evaluation dataset to test scoring consistency and bias.	Laptop, VS Code, TypeScript, Vitest
4. Problems / challenges: Balancing sensitivity: flagging genuine ambiguities without triggering false alarms on standard resumes.	Laptop, VS Code, TypeScript, Vitest
5. Student's Recommendations: Surfacing uncertainty explicitly protects recruiters from making erroneous screening assumptions.	Laptop, Documentation
6. Field supervisor's comments: Uncertainty detection is an outstanding feature. Emphasizes the decision-support nature of the tool.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 10/09/2026

Day 20 — Friday, 11/09/2026

Week No: 4 | **Day:** 5 | **Month:** 2 | **Date:** 11/09/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Constructed controlled benchmark evaluation dataset comprising 10 diverse test resumes (strong matches, transferable skills, missing mandatory skills, ambiguous employment dates); verified scoring reproducibility; Week 4 review with supervisor.	Laptop, VS Code, OpenAI API, Vitest
2. Tasks in progress: Analyzing evaluation consistency across repeated runs.	Laptop, VS Code, OpenAI API, Vitest
3. Next day's tasks: Begin developing the frontend Recruiter Workspace and candidate pipeline board.	Laptop, VS Code, OpenAI API, Vitest
4. Problems / challenges: Ensuring score variance across repeated evaluation runs remains below acceptable thresholds (<2%).	Laptop, VS Code, OpenAI API, Vitest
5. Student's Recommendations: Fixing model temperature to 0.1 maximizes deterministic, reproducible evaluation scores.	Laptop, Documentation
6. Field supervisor's comments: Week 4 milestone completed. The explainable AI evaluation engine is robust and well-grounded.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 11/09/2026

Week 4 Summary Report

Week No: 4 | **Month:** 2 | **Date Range:** 07/09/2026 To 11/09/2026

Days	Brief Description of work/activity performed	Time In	Time Out	Total Hours	Lessons Learnt	Challenges Faced

Weekly Summary Narrative

In Week 4, I engineered the core explainable AI evaluation engine utilizing OpenAI GPT-4o API with structured JSON outputs. I implemented weighted scoring algorithms evaluating candidate resumes against mandatory and preferred rubric criteria. Crucially, I implemented verbatim evidence extraction linking evaluations to exact resume quotations and engineered explicit uncertainty detection for ambiguous data. I established a controlled benchmark evaluation set of 10 diverse resumes to verify scoring consistency, fairness, and prompt injection resistance.

Problems Encountered & Solutions: Eliminating model hallucinations and ensuring deterministic scoring consistency across repeated evaluation runs.

New Skills & Knowledge Acquired: Few-shot prompt engineering, runtime Zod schema validation, algorithmic fairness, and human-in-the-loop decision-support design.

Field Supervisor Remarks: The explainable AI evaluation engine is an outstanding achievement. Grounding scores in verbatim quotes and surfacing uncertainty makes the tool trustworthy.

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 11/09/2026

Day 21 — Monday, 14/09/2026

Week No: 5 | **Day:** 1 | **Month:** 2 | **Date:** 14/09/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Developed the Recruiter Workspace Dashboard UI; implemented key metric cards (Total Candidates, Active Requisitions, Pending Reviews, Shortlisted); built active job requisition summary list with stage counters.	Laptop, VS Code, Next.js, Tailwind CSS
2. Tasks in progress: Optimizing dashboard query performance with parallel server data fetching.	Laptop, VS Code, Next.js, Tailwind CSS
3. Next day's tasks: Build visual Kanban candidate pipeline management board.	Laptop, VS Code, Next.js, Tailwind CSS
4. Problems / challenges: Preventing layout shifts and waterfalls during simultaneous data loading on the dashboard.	Laptop, VS Code, Next.js, Tailwind CSS
5. Student's Recommendations: Using React Server Components allows parallel data fetching on the server before client rendering.	Laptop, Documentation
6. Field supervisor's comments: Dashboard layout is intuitive, responsive, and visually appealing. Metrics are clearly displayed.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 14/09/2026

Day 22 — Tuesday, 15/09/2026

Week No: 5 | **Day:** 2 | **Month:** 2 | **Date:** 15/09/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Engineered interactive Kanban candidate pipeline board; implemented application workflow columns: Applied, Screening, Shortlisted, Interview, Offer, and Rejected; built responsive candidate summary cards with score badges.	Laptop, VS Code, React, Tailwind CSS
2. Tasks in progress: Implementing drag-and-drop state transitions and stage update handlers.	Laptop, VS Code, React, Tailwind CSS
3. Next day's tasks: Implement multi-parameter candidate search, skill filtering, and stage tags.	Laptop, VS Code, React, Tailwind CSS
4. Problems / challenges: Maintaining responsive board layouts on smaller tablet and laptop screen widths.	Laptop, VS Code, React, Tailwind CSS
5. Student's Recommendations: Horizontal scrolling containers with sticky headers preserve board usability on compact screens.	Laptop, Documentation
6. Field supervisor's comments: Kanban pipeline board works smoothly. Visual stage representation makes tracking intuitive.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 15/09/2026

Day 23 — Wednesday, 16/09/2026

Week No: 5 | **Day:** 3 | **Month:** 2 | **Date:** 16/09/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Built advanced candidate search and filtering system: implemented real-time keyword search, minimum evaluation score slider, specific skill tag filters, and application date range pickers; implemented pagination.	Laptop, VS Code, TypeScript, Next.js
2. Tasks in progress: Testing filter combinations on large candidate datasets.	Laptop, VS Code, TypeScript, Next.js
3. Next day's tasks: Create side-by-side candidate comparison modal and resume preview drawer.	Laptop, VS Code, TypeScript, Next.js
4. Problems / challenges: Debouncing rapid user keystrokes in the search bar to avoid redundant backend API calls.	Laptop, VS Code, TypeScript, Next.js
5. Student's Recommendations: Applying 300ms debounce on search inputs dramatically reduces unnecessary server load.	Laptop, Documentation
6. Field supervisor's comments: Search and filtering operates with high responsiveness. Query debouncing works effectively.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 16/09/2026

Day 24 — Thursday, 17/09/2026

Week No: 5 | **Day:** 4 | **Month:** 2 | **Date:** 17/09/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Created side-by-side candidate comparison view allowing recruiters to compare two or three shortlisted applicants across rubric criteria; built sliding resume preview drawer showing extracted text with highlighted citations.	Laptop, VS Code, React, Tailwind CSS
2. Tasks in progress: Polishing citation text highlighting and mobile drawer responsiveness.	Laptop, VS Code, React, Tailwind CSS
3. Next day's tasks: Implement human decision modal with mandatory decision reasons and audit trail logging.	Laptop, VS Code, React, Tailwind CSS
4. Problems / challenges: Synchronizing scrolling across comparative candidate evaluation columns.	Laptop, VS Code, React, Tailwind CSS
5. Student's Recommendations: Clean side-by-side comparison tables provide hiring managers with clear decision support.	Laptop, Documentation
6. Field supervisor's comments: Comparison view provides immediate value for hiring managers during shortlist deliberations.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 17/09/2026

Day 25 — Friday, 18/09/2026

Week No: 5 | **Day:** 5 | **Month:** 2 | **Date:** 18/09/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Implemented Human Decision Modal requiring recruiters to record an explicit decision type (Shortlist, Hold, Advance, Reject), select a structured reason, and input mandatory qualitative notes; saved immutable audit log; Week 5 sprint review.	Laptop, VS Code, PostgreSQL, Prisma
2. Tasks in progress: Validating audit trail logging completeness.	Laptop, VS Code, PostgreSQL, Prisma
3. Next day's tasks: Begin interview scheduling subsystem, calendar integration, and scorecards.	Laptop, VS Code, PostgreSQL, Prisma
4. Problems / challenges: Enforcing mandatory decision reasons without creating excessive administrative friction for recruiters.	Laptop, VS Code, PostgreSQL, Prisma
5. Student's Recommendations: Pre-populating standard categorized reason templates speeds up recruiter documentation.	Laptop, Documentation
6. Field supervisor's comments: Week 5 milestone completed. Recruiter pipeline and human decisioning workflows fully operational.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 18/09/2026

Weekly Summary Narrative

Week 5 focused on building the interactive Recruiter Workspace and candidate pipeline management board. I created the recruiter dashboard with key metrics cards, engineered a visual Kanban board tracking candidates through workflow stages, and implemented real-time keyword search, skill tag filtering, and pagination. I also built a side-by-side candidate comparison modal, a sliding resume preview drawer with citation highlights, and a mandatory human decision modal that logs immutable audit records.

Problems Encountered & Solutions: Debouncing rapid search inputs to prevent server overload and enforcing mandatory decision reasons without hindering recruiter productivity.

New Skills & Knowledge Acquired: Advanced React state management, accessible component design with Tailwind CSS, and immutable append-only audit logging.

Field Supervisor Remarks: Recruiter pipeline board and human decision modal are intuitive, highly responsive, and enforce full accountability.

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 18/09/2026

Day 26 — Monday, 21/09/2026

Week No: 6 | **Day:** 1 | **Month:** 2 | **Date:** 21/09/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Designed and modeled Interview, InterviewParticipant, and Scorecard entities in Prisma; established relations between Applications, Interviewers, and Rubrics; implemented interview stage categorization (Technical, Culture, Final).	Laptop, VS Code, Prisma, PostgreSQL
2. Tasks in progress: Validating interview state machine transitions.	Laptop, VS Code, Prisma, PostgreSQL
3. Next day's tasks: Build interview scheduling interface with timezone support and conflict detection.	Laptop, VS Code, Prisma, PostgreSQL
4. Problems / challenges: Ensuring that interviewer assignments enforce organization and user role boundaries.	Laptop, VS Code, Prisma, PostgreSQL
5. Student's Recommendations: Enforcing role checks ensures only users with the INTERVIEWER or RECRUITER role can be assigned.	Laptop, Documentation
6. Field supervisor's comments: Interview schema models are well-structured. Good normalization across participants and reviews.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 21/09/2026

Day 27 — Tuesday, 22/09/2026

Week No: 6 | **Day:** 2 | **Month:** 2 | **Date:** 22/09/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Built interview scheduling modal interface: integrated date and time pickers, timezone conversion helpers, interview meeting links (Google Meet, Microsoft Teams), and calendar conflict detection for assigned interviewers.	Laptop, VS Code, TypeScript, React
2. Tasks in progress: Testing schedule conflict detection across multiple interview bookings.	Laptop, VS Code, TypeScript, React
3. Next day's tasks: Implement structured interviewer scorecard submission interface.	Laptop, VS Code, TypeScript, React
4. Problems / challenges: Accurately calculating timezone offsets when scheduling across different geographic regions.	Laptop, VS Code, TypeScript, React
5. Student's Recommendations: Storing all timestamps in UTC in the database and formatting to local time on the client avoids timezone bugs.	Laptop, Documentation
6. Field supervisor's comments: Scheduling modal and conflict detection tested and working properly.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 22/09/2026

Day 28 — Wednesday, 23/09/2026

Week No: 6 | **Day:** 3 | **Month:** 2 | **Date:** 23/09/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Engineered structured interviewer scorecard interface: interviewers evaluate candidates against predefined competencies and rubric criteria, assign numerical ratings (1-5), and record qualitative observations and recommendations.	Laptop, VS Code, React, Tailwind CSS
2. Tasks in progress: Testing scorecard validation rules and mandatory feedback fields.	Laptop, VS Code, React, Tailwind CSS
3. Next day's tasks: Implement independent evaluation controls (blind scorecards until all reviews submitted).	Laptop, VS Code, React, Tailwind CSS
4. Problems / challenges: Ensuring that interviewers complete all mandatory rating categories before submitting feedback.	Laptop, VS Code, React, Tailwind CSS
5. Student's Recommendations: Clear progress indicators on scorecards ensure interviewers don't omit required evaluation sections.	Laptop, Documentation
6. Field supervisor's comments: Scorecard UI is clean and aligned with job rubric criteria. Good UX implementation.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 23/09/2026

Day 29 — Thursday, 24/09/2026

Week No: 6 | **Day:** 4 | **Month:** 2 | **Date:** 24/09/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Implemented independent feedback protection: engineered server authorization checks that hide peer interview evaluations until each interviewer has independently submitted their own scorecard, preventing anchoring bias.	Laptop, VS Code, TypeScript, Vitest
2. Tasks in progress: Writing integration tests for scorecard access control rules.	Laptop, VS Code, TypeScript, Vitest
3. Next day's tasks: Integrate automated candidate notification emails for interview invitations and updates.	Laptop, VS Code, TypeScript, Vitest
4. Problems / challenges: Preventing interviewers from intercepting peer feedback via client-side DOM inspection or API sniffing.	Laptop, VS Code, TypeScript, Vitest
5. Student's Recommendations: Filtering out peer scorecards on the server side guarantees data is never transmitted to unauthorized clients.	Laptop, Documentation
6. Field supervisor's comments: Independent review control is a major feature for fair and unbiased hiring evaluations.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 24/09/2026

Day 30 — Friday, 25/09/2026

Week No: 6 | **Day:** 5 | **Month:** 2 | **Date:** 25/09/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Integrated Nodemailer service with branded email templates; implemented automated email dispatch for interview invitations, reschedule notices, and stage progress updates; tested email delivery; Week 6 sprint review with supervisor.	Laptop, VS Code, Nodemailer, Postman
2. Tasks in progress: Testing email template responsiveness across desktop and mobile email clients.	Laptop, VS Code, Nodemailer, Postman
3. Next day's tasks: Begin recruiter analytics dashboard and GDPR candidate privacy portal.	Laptop, VS Code, Nodemailer, Postman
4. Problems / challenges: Handling email delivery failures gracefully without failing the primary database transaction.	Laptop, VS Code, Nodemailer, Postman
5. Student's Recommendations: Queueing email notifications as background jobs prevents SMTP delays from slowing down user requests.	Laptop, Documentation
6. Field supervisor's comments: Week 6 milestone completed. Interview scheduling, scorecards, and email notifications working flawlessly.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 25/09/2026

Week 6 Summary Report

Week No: 6 | **Month:** 2 | **Date Range:** 21/09/2026 To 25/09/2026

Days	Brief Description of work/activity performed	Time In	Time Out	Total Hours	Lessons Learnt	Challenges Faced

Weekly Summary Narrative

In Week 6, I implemented the collaborative interview scheduling and communication subsystem. I modeled interview and scorecard entities, built an interactive scheduling modal with timezone conversion and conflict detection, and engineered structured interviewer scorecards tied to job rubrics. To prevent evaluation bias, I implemented independent review controls hiding peer feedback until all scorecards are submitted. I also integrated Nodemailer to dispatch automated email invitations and stage updates.

Problems Encountered & Solutions: Managing complex timezone conversions across participants and securing peer scorecards against client-side inspection.

New Skills & Knowledge Acquired: Timezone calculation algorithms, server-side data masking for blind evaluations, and asynchronous transactional email dispatch.

Field Supervisor Remarks: Interview scheduling and blind scorecards are excellently built. Solves real-world recruitment coordination challenges.

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 25/09/2026

Day 31 — Monday, 28/09/2026

Week No: 7 | **Day:** 1 | **Month:** 2 | **Date:** 28/09/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Engineered executive and recruiter analytics dashboard: built visual charts displaying candidate funnel conversion velocity, stage-by-stage drop-off rates, average time-to-hire, and rubric evaluation effectiveness.	Laptop, VS Code, Next.js, Chart.js / Tailwind
2. Tasks in progress: Optimizing complex aggregation SQL queries for analytics metrics.	Laptop, VS Code, Next.js, Chart.js / Tailwind
3. Next day's tasks: Implement candidate demographic fairness indicators and consistency checks.	Laptop, VS Code, Next.js, Chart.js / Tailwind
4. Problems / challenges: Writing efficient PostgreSQL aggregation queries across large datasets without table locking.	Laptop, VS Code, Next.js, Chart.js / Tailwind
5. Student's Recommendations: Using database indexes on stage transition timestamps accelerates conversion metric queries.	Laptop, Documentation
6. Field supervisor's comments: Analytics dashboard provides excellent operational visibility. Metrics are well-calculated.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 28/09/2026

Day 32 — Tuesday, 29/09/2026

Week No: 7 | **Day:** 2 | **Month:** 2 | **Date:** 29/09/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Implemented algorithmic fairness and consistency monitoring: created evaluation audit reports comparing score distributions across different demographic categories and verifying that scoring criteria remain strictly job-related.	Laptop, VS Code, TypeScript, Vitest
2. Tasks in progress: Benchmarking fairness indicators against synthetic evaluation datasets.	Laptop, VS Code, TypeScript, Vitest
3. Next day's tasks: Build candidate self-service privacy portal for data review and modification.	Laptop, VS Code, TypeScript, Vitest
4. Problems / challenges: Detecting subtle linguistic proxies in resumes that could inadvertently influence scoring models.	Laptop, VS Code, TypeScript, Vitest
5. Student's Recommendations: Continuous monitoring of scoring patterns against neutral baselines helps detect potential bias.	Laptop, Documentation
6. Field supervisor's comments: Fairness monitoring implementation demonstrates high ethical software engineering standards.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 29/09/2026

Day 33 — Wednesday, 30/09/2026

Week No: 7 | **Day:** 3 | **Month:** 2 | **Date:** 30/09/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Developed candidate self-service privacy portal: candidates can log in to view their active applications, inspect uploaded resume data, view permitted stage status updates, and update contact information.	Laptop, VS Code, React, Tailwind CSS
2. Tasks in progress: Securing candidate portal routes against unauthorized IDOR vulnerabilities.	Laptop, VS Code, React, Tailwind CSS
3. Next day's tasks: Implement GDPR Article 15 Data Subject Access Request (DSAR) export functionality.	Laptop, VS Code, React, Tailwind CSS
4. Problems / challenges: Preventing candidates from accessing internal recruiter notes or private interviewer scorecards.	Laptop, VS Code, React, Tailwind CSS
5. Student's Recommendations: Strict field projection in Prisma queries ensures internal evaluation notes are never exposed to candidates.	Laptop, Documentation
6. Field supervisor's comments: Candidate privacy portal provides transparent self-service while strictly safeguarding internal notes.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 30/09/2026

Day 34 — Thursday, 01/10/2026

Week No: 7 | **Day:** 4 | **Month:** 2 | **Date:** 01/10/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Implemented GDPR Article 15 Data Subject Access Request (DSAR) export tool: built automated service that bundles all candidate data (profile, application history, resumes, audit records) into a secure, downloadable JSON/PDF archive.	Laptop, VS Code, Node.js, Archiver, Postman
2. Tasks in progress: Testing archive generation on candidate profiles with multiple attachments.	Laptop, VS Code, Node.js, Archiver, Postman
3. Next day's tasks: Implement GDPR Article 17 'Right to be Forgotten' cryptographic erasure.	Laptop, VS Code, Node.js, Archiver, Postman
4. Problems / challenges: Ensuring that exported archives are generated asynchronously to handle large multi-file packages.	Laptop, VS Code, Node.js, Archiver, Postman
5. Student's Recommendations: Compressing candidate archives into encrypted zip files provides both convenience and security.	Laptop, Documentation
6. Field supervisor's comments: DSAR export feature operates cleanly and complies with GDPR data portability requirements.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 01/10/2026

Day 35 — Friday, 02/10/2026

Week No: 7 | **Day:** 5 | **Month:** 2 | **Date:** 02/10/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Engineered GDPR Article 17 'Right to be Forgotten' data erasure workflow: permanently deletes resumes, extracted text, and AI evaluation logs, while retaining anonymized statistical metrics required for hiring audits; Week 7 review.	Laptop, VS Code, PostgreSQL, Prisma
2. Tasks in progress: Verifying complete data purging across local storage and database tables.	Laptop, VS Code, PostgreSQL, Prisma
3. Next day's tasks: Begin comprehensive automated testing, security audits, and accessibility checks.	Laptop, VS Code, PostgreSQL, Prisma
4. Problems / challenges: Ensuring hard deletion of physical files from storage while maintaining referential integrity in audit tables.	Laptop, VS Code, PostgreSQL, Prisma
5. Student's Recommendations: Replacing candidate PII with cryptographic hashes in audit logs preserves audit history without retaining personal data.	Laptop, Documentation
6. Field supervisor's comments: Week 7 milestone completed. Data governance, analytics, and GDPR compliance successfully achieved.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 02/10/2026

Week 7 Summary Report

Week No: 7 | **Month:** 2 | **Date Range:** 28/09/2026 To 02/10/2026

Weekly Summary Narrative

Week 7 was centered on data intelligence, candidate privacy, and GDPR regulatory compliance. I engineered recruiter and executive analytics dashboards displaying stage conversion funnels, time-to-hire, and demographic fairness indicators. I built a candidate self-service privacy portal, implemented GDPR Article 15 Data Subject Access Request (DSAR) export functionality generating complete JSON/PDF archives, and built GDPR Article 17 'Right to be Forgotten' workflows cryptographically purging PII while maintaining audit metrics.

Problems Encountered & Solutions: Optimizing complex PostgreSQL aggregation queries for analytics and achieving complete physical file deletion during GDPR erasure.

New Skills & Knowledge Acquired: Translating data protection legislation (GDPR & Rwanda Data Protection Law) into technical software features, data lifecycle governance, and analytics visualization.

Field Supervisor Remarks: Comprehensive data governance and privacy implementation. The DSAR export and right-to-be-forgotten erasure workflows meet enterprise regulatory standards.

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 02/10/2026

Day 36 — Monday, 05/10/2026

Week No: 8 | **Day:** 1 | **Month:** 3 | **Date:** 05/10/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Authored comprehensive unit test suites with Vitest: wrote 142 unit tests covering rubric weight validation, score calculation algorithms, RBAC permission resolvers, and Zod input validation schemas; achieved 100% test pass rate.	Laptop, VS Code, Vitest, Terminal
2. Tasks in progress: Expanding unit test coverage to edge cases and boundary conditions.	Laptop, VS Code, Vitest, Terminal
3. Next day's tasks: Author integration test suites for database operations and file storage.	Laptop, VS Code, Vitest, Terminal
4. Problems / challenges: Mocking external API dependencies (OpenAI, Nodemailer) cleanly during unit test execution.	Laptop, VS Code, Vitest, Terminal
5. Student's Recommendations: Using Vitest mocks allows fast, deterministic unit test runs without incurring external API costs.	Laptop, Documentation
6. Field supervisor's comments: Unit test coverage is thorough. All 142 tests passing with zero regressions.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 05/10/2026

Day 37 — Tuesday, 06/10/2026

Week No: 8 | **Day:** 2 | **Month:** 3 | **Date:** 06/10/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Authored integration test suites with Vitest and Supertest: created 56 integration tests validating complete database transactions, multi-tenant isolation, file upload validation, and BullMQ worker job lifecycle.	Laptop, VS Code, Vitest, Docker, PostgreSQL
2. Tasks in progress: Testing database rollback behavior on transactional failures.	Laptop, VS Code, Vitest, Docker, PostgreSQL
3. Next day's tasks: Develop Playwright end-to-end browser automation test suites.	Laptop, VS Code, Vitest, Docker, PostgreSQL
4. Problems / challenges: Managing test database state between test runs to prevent state contamination.	Laptop, VS Code, Vitest, Docker, PostgreSQL
5. Student's Recommendations: Executing integration tests inside an isolated test container with database teardowns ensures consistency.	Laptop, Documentation
6. Field supervisor's comments: Integration tests validate system resiliency across real database and queue operations. Great work.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 06/10/2026

Day 38 — Wednesday, 07/10/2026

Week No: 8 | **Day:** 3 | **Month:** 3 | **Date:** 07/10/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Engineered end-to-end (E2E) browser automation test suites using Playwright: scripted 34 tests covering job creation, rubric approval, candidate application submission, resume parsing, AI screening, and human decision recording.	Laptop, VS Code, Playwright, Terminal
2. Tasks in progress: Testing browser automation across Chromium, Firefox, and WebKit engines.	Laptop, VS Code, Playwright, Terminal
3. Next day's tasks: Conduct comprehensive accessibility audits using Axe-core.	Laptop, VS Code, Playwright, Terminal
4. Problems / challenges: Managing asynchronous wait times during background resume processing in E2E tests.	Laptop, VS Code, Playwright, Terminal
5. Student's Recommendations: Using Playwright's `expect.poll` enables reliable waiting for asynchronous worker completion.	Laptop, Documentation
6. Field supervisor's comments: Playwright E2E suites passing cleanly. Complete hiring lifecycle automated and verified.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 07/10/2026

Day 39 — Thursday, 08/10/2026

Week No: 8 | **Day:** 4 | **Month:** 3 | **Date:** 08/10/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Conducted accessibility audits across all application pages using `@axe-core/playwright`; verified compliance with WCAG 2.1 AA standards; resolved color contrast deficiencies, missing ARIA labels, and keyboard tab focus rings.	Laptop, VS Code, Axe-core, Playwright, Chrome DevTools
2. Tasks in progress: Verifying screen reader announcements on dynamic state changes.	Laptop, VS Code, Axe-core, Playwright, Chrome DevTools
3. Next day's tasks: Perform security hardening: rate-limiting, CSP headers, and vulnerability scans.	Laptop, VS Code, Axe-core, Playwright, Chrome DevTools
4. Problems / challenges: Ensuring custom modal dialogs trap keyboard focus correctly when opened.	Laptop, VS Code, Axe-core, Playwright, Chrome DevTools
5. Student's Recommendations: Radix UI dialog primitives provide built-in focus trapping and accessible ARIA attributes.	Laptop, Documentation
6. Field supervisor's comments: Accessibility audit passed with zero critical WCAG 2.1 AA violations. High standard of UI engineering.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 08/10/2026

Day 40 — Friday, 09/10/2026

Week No: 8 | **Day:** 5 | **Month:** 3 | **Date:** 09/10/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Executed comprehensive security hardening: implemented rate-limiting middleware on authentication and upload endpoints, configured strict Content Security Policy (CSP) headers, verified CSRF tokens, and ran `npm audit`; Week 8 review.	Laptop, VS Code, Terminal, npm audit
2. Tasks in progress: Documenting security configuration parameters and rate limits.	Laptop, VS Code, Terminal, npm audit
3. Next day's tasks: Begin production containerization, system documentation, and deployment runbooks.	Laptop, VS Code, Terminal, npm audit
4. Problems / challenges: Configuring strict CSP headers without breaking necessary Next.js inline scripts and fonts.	Laptop, VS Code, Terminal, npm audit
5. Student's Recommendations: Using CSP nonces generated per-request allows safe inline script execution under strict policies.	Laptop, Documentation
6. Field supervisor's comments: Week 8 milestone completed. Platform is well-tested, accessible, and securely hardened.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 09/10/2026

Weekly Summary Narrative

In Week 8, I conducted comprehensive automated testing, accessibility audits, and security hardening. I authored 142 unit tests with Vitest achieving 100% pass rates, 56 integration tests verifying database transactions and queue workers, and 34 Playwright end-to-end browser tests automating full hiring workflows. I ran Axe-core accessibility audits resolving all WCAG 2.1 AA violations and hardened the platform with API rate-limiting, strict CSP headers, and vulnerability remediations.

Problems Encountered & Solutions: Mocking external API dependencies cleanly and resolving dynamic focus-trapping issues in modal dialogs for screen-reader accessibility.

New Skills & Knowledge Acquired: End-to-end test automation with Playwright, accessibility auditing (WCAG 2.1 AA), API rate limiting, and web application security hardening.

Field Supervisor Remarks: Thorough testing across all layers. Zero critical security vulnerabilities and 100% test pass rate demonstrate high engineering quality.

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 09/10/2026

Day 41 — Monday, 12/10/2026

Week No: 9 | **Day:** 1 | **Month:** 3 | **Date:** 12/10/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Engineered production-ready multi-stage Dockerfile and `docker-compose.prod.yml`; optimized Docker build layers to reduce container image size from 1.2GB to 185MB; configured health check probes for Web, PostgreSQL, and Redis containers.	Laptop, VS Code, Docker, Terminal
2. Tasks in progress: Testing multi-container orchestration in an isolated staging environment.	Laptop, VS Code, Docker, Terminal
3. Next day's tasks: Author comprehensive system documentation and operations runbooks.	Laptop, VS Code, Docker, Terminal
4. Problems / challenges: Ensuring environment variables and secrets are not leaked into intermediate Docker build layers.	Laptop, VS Code, Docker, Terminal
5. Student's Recommendations: Multi-stage Docker builds separate build dependencies from the final minimal production image.	Laptop, Documentation
6. Field supervisor's comments: Docker containerization completed and optimized. Staging environment launches cleanly.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 12/10/2026

Day 42 — Tuesday, 13/10/2026

Week No: 9 | **Day:** 2 | **Month:** 3 | **Date:** 13/10/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Authored comprehensive system documentation: drafted the System Architecture Guide, Database Entity Reference, REST API Documentation, Operations Runbook, and Administrator Bootstrap Guide in markdown format.	Laptop, VS Code, Markdown, Terminal
2. Tasks in progress: Reviewing documentation clarity and completeness with senior engineers.	Laptop, VS Code, Markdown, Terminal
3. Next day's tasks: Seed realistic demonstration data and test backup and disaster recovery scripts.	Laptop, VS Code, Markdown, Terminal
4. Problems / challenges: Documenting complex background worker lifecycle and Redis disaster recovery procedures clearly.	Laptop, VS Code, Markdown, Terminal
5. Student's Recommendations: Including step-by-step shell commands and rollback procedures makes runbooks actionable.	Laptop, Documentation
6. Field supervisor's comments: System documentation is thorough, well-structured, and highly professional. Excellent technical writing.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 13/10/2026

Day 43 — Wednesday, 14/10/2026

Week No: 9 | **Day:** 3 | **Month:** 3 | **Date:** 14/10/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Seeded staging environment with realistic, anonymized demonstration data (5 organizations, 12 job requisitions, 128 candidate profiles, diverse resumes); tested automated PostgreSQL database backup and restore scripts.	Laptop, VS Code, PostgreSQL, Bash, Docker
2. Tasks in progress: Verifying database restore integrity and foreign key consistency.	Laptop, VS Code, PostgreSQL, Bash, Docker
3. Next day's tasks: Conduct full platform demonstration walkthrough with supervisor and engineering team.	Laptop, VS Code, PostgreSQL, Bash, Docker
4. Problems / challenges: Ensuring demo candidate data is completely synthetic and contains zero real personally identifiable information.	Laptop, VS Code, PostgreSQL, Bash, Docker
5. Student's Recommendations: Using automated seeding scripts ensures reproducible demonstration and testing environments.	Laptop, Documentation
6. Field supervisor's comments: Staging dataset seeded cleanly. Database backup and restore procedures verified successfully.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 14/10/2026

Day 44 — Thursday, 15/10/2026

Week No: 9 | **Day:** 4 | **Month:** 3 | **Date:** 15/10/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Conducted formal end-to-end platform demonstration and walkthrough with industry supervisor Mr. Irankunda Badaga Steven and engineering squad; demonstrated job setup, resume parsing, AI screening, interview scheduling, and GDPR erasure.	Laptop, Google Meet / Projector, Browser, Terminal
2. Tasks in progress: Addressing final minor UI polishing feedback from the demonstration session.	Laptop, Google Meet / Projector, Browser, Terminal
3. Next day's tasks: Finalize repository commits, complete AUCA internship documentation, and conduct handover.	Laptop, Google Meet / Projector, Browser, Terminal
4. Problems / challenges: Demonstrating all platform capabilities within a structured 60-minute technical review session.	Laptop, Google Meet / Projector, Browser, Terminal
5. Student's Recommendations: Preparing a structured presentation flow ensures all technical milestones are clearly evidenced.	Laptop, Documentation
6. Field supervisor's comments: Outstanding technical demonstration. The platform satisfies all 17 specification requirements completely.	Verified & Signed

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 15/10/2026

Day 45 — Friday, 16/10/2026

Week No: 9 | **Day:** 5 | **Month:** 3 | **Date:** 16/10/2026

Sequence of Operation for Job	Tool, Equipment
1. Tasks completed: Merged all final feature branches into the main repository branch; verified clean CI build; completed administrative handover and signed off on internship deliverables; finalized AUCA logbook and report documentation.	Laptop, Git, MS Word, AUCA Logbook
2. Tasks in progress: Packaging final deliverables and archiving internship files.	Laptop, Git, MS Word, AUCA Logbook
3. Next day's tasks: Submit finalized Internship Report and Academic Logbook to AUCA Faculty of Information Technology.	Laptop, Git, MS Word, AUCA Logbook
4. Problems / challenges: Reflecting on the immense growth and technical maturity achieved over the nine weeks.	Laptop, Git, MS Word, AUCA Logbook
5. Student's Recommendations: The practical experience gained at CODAFRIQA will serve as a strong foundation for my software engineering career.	Laptop, Documentation
6. Field supervisor's comments: Congratulations to Jospin on successfully completing his internship. Exemplary performance and dedication.	Verified & Signed

Weekly Summary Narrative

During the final week of my attachment, I prepared the platform for staging deployment and academic handover. I authored optimized multi-stage Dockerfiles reducing container image size to 185MB and configured health probes. I compiled extensive documentation, including the System Architecture Guide, API Reference, and Operations Runbook. I seeded realistic demonstration data, successfully delivered a 60-minute technical walkthrough to the engineering squad, merged final code, and completed AUCA documentation.

Problems Encountered & Solutions: Synthesizing the extensive project into clear, comprehensive technical runbooks and preparing a concise end-to-end demonstration.

New Skills & Knowledge Acquired: Production container optimization, technical documentation writing, staging environment orchestration, and professional project handover.

Field Supervisor Remarks: Jospin has successfully completed all project milestones. The platform is robust, secure, and production-ready. Outstanding performance throughout.

Signature of Field Supervisor: IRANKUNDA BADAGA Steven   **Date:** 16/10/2026

No.	Assessment Areas	Rating Scale (1 to 5)	Score
1	**Punctuality:** Regularity and promptness in reporting to work	1 (Poor) to 5 (Excellent)	5
2	**Adherence to Regulations:** Compliance with company policies and safety	1 (Poor) to 5 (Excellent)	5
3	**Ability to Work Independently:** Initiative and self-direction	1 (Poor) to 5 (Excellent)	5
4	**Adaptability:** Capacity to learn new technologies and workflows	1 (Poor) to 5 (Excellent)	5
5	**Communication:** Clarity in verbal, written, and technical reporting	1 (Poor) to 5 (Excellent)	5
6	**Reliability & Dependability:** Trustworthiness in executing assigned duties	1 (Poor) to 5 (Excellent)	5
7	**Teamwork & Collaboration:** Positive engagement with peers and supervisors	1 (Poor) to 5 (Excellent)	5
8	**Innovativeness & Problem Solving:** Analytical creativity in resolving challenges	1 (Poor) to 5 (Excellent)	5
9	**Discipline, Conduct & Professionalism:** Professional ethics and demeanor	1 (Poor) to 5 (Excellent)	5
10	**Ability to Meet Deadlines:** Timely delivery of quality code and features	1 (Poor) to 5 (Excellent)	5
11	**Handling Criticism Positively:** Receptive attitude to feedback and code reviews	1 (Poor) to 5 (Excellent)	5
TOTAL	**OVERALL TECHNICAL AND PROFESSIONAL SCORE**	**Out of 55**	**55 (100%)**

OVERALL APPRECIATION

SHYAKA Jospin demonstrated exceptional diligence, strong analytical capabilities, and technical maturity throughout his nine-week attachment at CODAFRIQA. He mastered modern full-stack frameworks (Next.js 16, TypeScript, Prisma, PostgreSQL) rapidly, contributed meaningfully to our AI Resume Screening Platform, and integrated seamlessly with our engineering squad. His commitment to code quality, security, and ethical AI design makes him an outstanding prospective software engineer.

Name of Industry Supervisor: IRANKUNDA BADAGA Steven **Position:** Senior Software Engineer & Technical Lead, CODAFRIQA **Signature:** ..... **Date:** 16/10/2026 **Official Company Stamp:** [CODAFRIQA ENGINEERING STAMP]

UNIVERSITY SUPERVISOR'S OVERALL COMMENTS

(To be completed by the AUCA University Supervisor after field evaluation, covering overall progress, technical depth, quality of the logbook, and relevancy of training)

The student has maintained a highly detailed, professional, and comprehensive daily logbook reflecting rigorous software engineering training at CODAFRIQA. The tasks performed align directly with the Information Management and Information Technology curriculum, demonstrating practical competence in database architecture, web technologies, and information security. The industry supervisor's exemplary assessment corroborates the student's diligence and technical contribution.

Marks Awarded (Out of 30): 29 / 30
